## TABLE OF CONTENTS

**ANESTHESIOLOGY**

- **This Month in ANESTHESIOLOGY** ........................................... 1A
- **Science, Medicine, and the Anesthesiologist** ......................... 13A
- **Infographics in ANESTHESIOLOGY** .................................... 17A

### Editorial Views

- **Trusted Evidence: Discovery to Practice**
  
  E. D. Kharasch ................................................................. 1

- **Anesthesia and Cancer Recurrence: Context for Divergent Study Outcomes**
  D. I. Sessler and B. Riedel .................................................. 3

- **Succinylcholine and Dantrolene: Inseparable in the Emergency Cupboard?**
  P. M. Hopkins ................................................................. 6

- **Mechanical Power: A Biomarker for the Lung?**
  L. Brochard and A. Bersten ............................................... 9

### Practice Parameters

### Perioperative Medicine

- **Total Intravenous Anesthesia versus Inhalation Anesthesia for Breast Cancer Surgery: A Retrospective Cohort Study**
  S. Yoo, H.-B. Lee, W. Han, D.-Y. Noh, S.-K. Park, W. H. Kim, and J.-T. Kim ................................................................. 31

In a large propensity-matched retrospective cohort analysis, the authors compared total IV and volatile anesthesia for breast cancer surgery. Recurrence hazard was similar with each approach. Selection of IV or volatile anesthesia should be based on factors other than cancer recurrence.

- **Succinylcholine Use and Dantrolene Availability for Malignant Hyperthermia Treatment: Database Analyses and Systematic Review**
  

The authors performed an analysis of data from three databases and a systematic literature review. Providers frequently use succinylcholine, including during difficult mask ventilation. Succinylcholine given without volatile anesthetics triggered 24 malignant hyperthermia events, 13 of which were treated with dantrolene. Fourteen patients experienced substantial complications, and one died. Delayed dantrolene treatment worsened patient outcomes.

- **Norepinephrine Infusion for Preventing Postspinal Anesthesia Hypotension during Cesarean Delivery: A Randomized Dose-finding Trial**
  

This randomized, double-blinded trial compared prophylactic norepinephrine infusions of 0.025, 0.050, or 0.075 μg · kg⁻¹ · min⁻¹, started after bupivacaine spinal anesthesia, in full-term parturients having elective cesarean delivery. The primary outcome, maternal hypotension (systolic blood pressure less than 80% of baseline), occurred less frequently after both 0.050 and 0.075 μg · kg⁻¹ · min⁻¹ compared to 0.025 μg · kg⁻¹ · min⁻¹ norepinephrine.

- **Cognitive Effects of Perioperative Pregabalin: Secondary Exploratory Analysis of a Randomized Placebo-controlled Study**
  
  M. Myhre, H. B. Jacobsen, S. Andersson, and A. Stubhaug .......... 63

This secondary analysis of data demonstrating that perioperative administration of pregabalin was associated with a reduction in opioid requirements and incisional hyperalgesia suggests that these benefits may be compromised by an increased risk of developing impaired postoperative cognitive performance.

---

ON THE COVER: The association between type of anesthesia and recurrence of cancer remains controversial. In this issue of ANESTHESIOLOGY, Yoo et al. examine the association of type of anesthesia with recurrence-free survival after breast cancer surgery. In an accompanying Editorial View, Sessler and Riedel review the broader scientific literature regarding the association between choice of anesthesia and cancer recurrence and places this new report in perspective. Illustration by Annemarie Johnson, Vivo Visuals.

Triple-low Alerts Do Not Reduce Mortality: A Real-time Randomized Trial

A randomized electronic alert of triple-low events to treating clinicians did not reduce 90-day mortality. The alerts minimally influenced clinician responses, assessed as vasopressor administration or reduction in end-tidal volatile anesthetic partial pressure, and there was no association between response to alerts and mortality. Triple-low events predict mortality but do not appear to be causally related.

Major Adverse Cardiac Events and Mortality Associated with Electroconvulsive Therapy: A Systematic Review and Meta-analysis
A. Duma, M. Maleczek, B. Panjikaran, H. Herkner, T. Karrison, and P. Nagele

Major adverse cardiac events and death after electroconvulsive therapy are infrequent and occur in about 1 of 50 patients and after about 1 of 200 to 500 electroconvulsive therapy treatments.

Blood Pressure and End-tidal Carbon Dioxide Ranges during Aneurysm Occlusion and Neurologic Outcome after an Aneurysmal Subarachnoid Hemorrhage
A. Akkermans, J. A. van Waes, L. M. Peelen, G. J. Rinkel, and W. A. van Klui

The investigators retrospectively evaluated 1,099 patients who had endovascular coiling or surgical clipping for subarachnoid hemorrhages. There were no clinically important or statistical significant associations between either end-tidal carbon dioxide or mean arterial pressure thresholds and Glasgow Outcome Scale at discharge or three months. Other prognostic factors are more important than carbon dioxide and blood pressure, at least within the observed clinical ranges.

BASIC SCIENCE

Activation of Parabrachial Nucleus Glutamatergic Neurons Accelerates Reanimation from Sevoflurane Anesthesia in Mice

Using chemogenetic techniques, activation of parabrachial nucleus glutamatergic neurons prolonged anesthetic induction and hastened emergence in mice. Inhibition of these neurons provided opposite effects. Modulating the activity of arousal centers may provide an approach to controlling the duration of general anesthesia.

Critical Care Medicine

BASIC SCIENCE

Positive End-expiratory Pressure and Mechanical Power

This in vivo study (36 pigs mechanically ventilated in the prone position) suggests that low levels of positive end-expiratory pressure reduce pressure associated with atelectasis, and above a threshold level of power, positive end-expiratory pressure causes lung injury and adverse hemodynamics.

Pain Medicine

CLINICAL SCIENCE

Analgesic Effects of Hydromorphone versus Buprenorphine in Buprenorphine-maintained Individuals

Large doses of intravenous hydromorphone can provide analgesia in buprenorphine-maintained individuals. However, the use of hydromorphone for analgesia in buprenorphine-maintained individuals confers greater abuse liability and side effects than does supplemental intravenous buprenorphine.

Why Money Alone Can’t (Always) “Nudge” Physicians: The Role of Behavioral Economics in the Design of Physician Incentives
D. A. Lubarsky, M. T. French, H. S. Gitlow, L. F. Rosen, and S. G. Ullmann

Despite the widespread application of incentive systems in health care to enhance physician productivity and quality, they have not been well studied and often do not produce the desired results.

MIND TO MIND

Winner Announced: The Letheon 2nd Annual Creative Writing Competition
S. T. Harvey

INSTRUCTIONS FOR AUTHORS

The most recently updated version of the Instructions for Authors is available at www.anesthesiology.org. Please refer to the Instructions for the preparation of any material for submission to Anesthesiology.

Manuscripts submitted for consideration for publication must be submitted in electronic format. The preferred method is via the Journal’s Web site (http://www.anesthesiology.org). Detailed directions for submissions and the most recent version of the Instructions for Authors can be found on the Web site (http://www.anesthesiology.org). Books and educational materials should be sent to Alan Jay Schwartz, M.D., M.S.Ed., Director of Education, Department of Anesthesiology and Critical Care Medicine, The Children’s Hospital of Philadelphia, 34th Street and Civic Center Blvd., Room 9327, Philadelphia, Pennsylvania 19104-4399. Article-specific permission requests are managed with Copyright Clearance Center’s Rightslink service. Information can be accessed directly from articles on the journal Web site. More information is available at http://anesthesiology.pubs.asahq.org/public/rightsandpermissions.aspx. For questions about the Rightslink service, e-mail customerscare@copyright.com or call 877-622-5543 (U.S. only) or 978-777-9919. Advertising and related correspondence should be addressed to Advertising Manager, ANESTHESIOLOGY, Wolters Kluwer Health, Inc., Two Commerce Square, 2001 Market Street, Philadelphia, Pennsylvania 19103 (Web site: http://www.wkacenter.com/). A publication of an advertisement in ANESTHESIOLOGY does not constitute endorsement by the Society or Wolters Kluwer Health, Inc. of the product or service described therein or of any representations made by the advertiser with respect to the product or service.

ANESTHESIOLOGY (ISSN 0003–3022) is published monthly by Wolters Kluwer Health, Inc., 14700 Citicorp Drive, Bldg 3, Hagerstown, MD 21742. Business office: Two Commerce Square, 2001 Market Street, Philadelphia, PA 19104. Periodicals postage paid at Hagerstown, MD, and at additional mailing offices. Annual Subscription Rates: United States—$930 Individual, $2054 Institution, $374 In-training. Rest of World—$981 Individual, $2281 Institution, $374 In-training. Single copy rate $207. Subscriptions outside of North America must add $55 for airmail delivery. Add state sales tax, where applicable. The GST tax of 7% must be added to all orders shipped to Canada (Wolters Kluwer Health, Inc.’s GST Identification # R85524239; Publications Mail Agreement # 41196727). The price for institutions includes name of institution and state of institution. Institutional rates apply to libraries, hospitals, corporations, and partnerships of three or more individuals. Subscription prices outside the United States must be prepaid. Prices subject to change without notice. Subscriptions will begin with currently available issue unless otherwise requested. Visit us online at www.anesthesia.org.

Individual and In-training subscription rates include print and online access to the general issues. Online-only subscriptions for individuals ($308) and persons in training ($308) are available to nonmembers and may be ordered by downloading a copy of the Online Subscription FAXback Form from the Web site, completing the information requested, and faxing the completed form to 301-223-2400. Work orders must be pre-paid. In-training subscriptions for individuals ($308) and persons in training ($308) are available to nonmembers and may be ordered by downloading a copy of the Online Subscription FAXback Form from the Web site, completing the information requested, and faxing the completed form to 301-223-2400. Online-only subscriptions for individuals ($308) and persons in training ($308) are available to nonmembers and may be ordered by contacting the Ovid Customer Service Department at 1-800-638-3030; fax 301-223-2400.
