225 To Help the Dying Die—A New Duty for Anesthesiologists?

Albert R. Jonseñ

229 A Practice Parameters Overview

James F. Arens

■ CLINICAL INVESTIGATIONS

231 Epidural Sufentanil and Bupivacaine for Labor Analgesia and Doppler Velocimetry of the Umbilical and Uterine Arteries

S. Alahuhta, J. Räsänen, P. Jouppila, R. Jouppila, and A. I. Hollmén

Epidural administration of sufentanil and bupivacaine provides effective analgesia for healthy parturients while producing few maternal or fetal side effects.

237 Indirect Memory during Anesthesia: The Effect of Midazolam

Cheryl L. Westmoreland, Peter S. Sebel, Eugene Winograd, and William P. Goldman

Preanesthetic intravenous midazolam administered to patients to whom tapes were played intraoperatively to assess recollection following surgery resulted in no evidence of indirect memory during anesthesia.

242 The Pressure Rate Quotient Is not an Indicator of Myocardial Ischemia in Humans: An Echocardiographic Evaluation

Stephen N. Harris, Michael A. Gordon, Michael K. Urban, Theresa Z. O'Connor, and Paul G. Barash

The occurrence of ischemia in patients undergoing coronary artery bypass surgery cannot be detected reliably by using the pressure rate quotient as an index.

CONTENTS

- 251 Effect of Posture on Lung and Regional Chest Wall Mechanics**
George M. Barnas, Michael D. Green, Colin F. Mackenzie, Simon J. Fletcher, D. Neil Campbell, Colin Runcie, and Gearin E. Broderick
- Access to the site of surgery and facilitation of postoperative care require a wide range of postures that cause only minor changes in respiratory system mechanics in healthy awake subjects.
- 260 Sufentanil Disposition: Is It Affected by Erythromycin Administration?**
Richard R. Bartkowski, Michael E. Goldberg, Suzanne Huffnagle, and Richard H. Epstein
- This study of the effect of erythromycin on sufentanil pharmacokinetics reveals that, unlike alfentanil, sufentanil clearance is not reduced by oral erythromycin administration.
- 266 Increases in Hemodynamic Variables and Catecholamine Levels after Rapid Increase in Isoflurane Concentration**
Arvi Yli-Hankala, Tarja Randell, Timo Seppälä, and Leena Lindgren
- An increase in heart rate, arterial pressure, and norepinephrine concentration is seen when isoflurane administration is increased suddenly in healthy patients undergoing minor surgery.
- 272 Menstruation Increases the Risk of Nausea and Vomiting after Laparoscopy: A Prospective Randomized Study**
W. S. Beattie, T. Lindblad, D. N. Buckley, and J. B. Forrest
- The incidence of postoperative nausea and vomiting is increased following laparoscopic tubal sterilization performed during the first 8 days of the menstrual cycle.
- 277 Hemodynamic and Analgesic Actions of Epidurally Administered Clonidine**
James Eisenach, Dawn Detweiler, and David Hood
- Epidural clonidine produced analgesia similar to that obtained with intravenous alfentanil but with less respiratory depression.
- 288 The Effect of Alfentanil on Cerebral Blood Flow Velocity and Intracranial Pressure during Isoflurane-Nitrous Oxide Anesthesia in Humans**
Teresa Slee Mayberg, Arthur M. Lam, Calvin C. Eng, Varun Laohaprasit, and H. Richard Winn
- Alfentanil administered to neurosurgical and orthopedic patients receiving isoflurane and nitrous oxide resulted in no cerebrovasal dilation nor increase in intracranial pressure.

CONTENTS

■ LABORATORY INVESTIGATIONS

295 Direct *In Vivo* Visualization of Bronchodilation Induced by Inhalational Anesthesia Using High-resolution Computed Tomography

Robert H. Brown, Wayne Mitzner, Elias Zerhouni, and Carol A. Hirshman

Using computed tomography to study airway dilation by halothane in dogs, halothane was shown to dilate airways by blocking baseline vagal tone.

301 Neostigmine Counteracts Spinal Clonidine-induced Hypotension in Sheep

Julie S. Williams, Chuanyao Tong, and James C. Eisenach

In a study of pain therapy, the hypotension and sedation produced by clonidine are shown to be diminished by neostigmine.

308 The Role of Focal Nerve Ischemia and Wallerian Degeneration in Peripheral Nerve Injury Producing Hyperesthesia

Robert R. Myers, Tatsuo Yamamoto, Tony L. Yaksh, and Henry C. Powell

Modest degrees of ischemia caused by sciatic nerve ligation of the rat do not produce significant hyperesthesia.

317 Spinal Cord Perfusion Pressure in Dogs after Control of Proximal Aortic Hypertension during Thoracic Aortic Cross-clamping with Esmolol or Sodium Nitroprusside

Thomas Ryan, David Mannion, Walter O'Brien, Pierce Grace, David Bouchier-Hayes, and Anthony J. Cunningham

Esmolol was associated with greater spinal cord perfusion pressure, but adverse hemodynamic effects, when compared with nitroprusside during thoracic aortic cross-clamping.

326 Enflurane, Halothane, and Isoflurane Attenuate Contractile Responses to Exogenous and Endogenous Norepinephrine in Isolated Small Mesenteric Veins of the Rabbit

Anna Stadnicka, Noel M. Flynn, Zeljko J. Bosnjak, and John P. Kampine

Vascular endothelium, *via* endothelium-derived relaxing factor, modulates exogenous norepinephrine responses of the venous smooth muscle.

CONTENTS

- 335 Focal Cerebral Ischemia in Rats: Effect of Hypervolemic Hemodilution with Diaspirin Cross-linked Hemoglobin Versus Albumin on Brain Injury and Edema**

Daniel J. Cole, Randall M. Schell, John C. Drummond, and Lowell Reynolds

Hemodilution using diaspirin cross-linked hemoglobin reduces ischemic brain damage more effectively than does hemodilution induced by albumin.

- 343 Myocardial Hypercarbic Acidosis Reduces Cardiac Resuscitability**

Frank A. Maldonado, Max Harry Weil, Wanchun Tang, Joe Bisera, Raúl J. Gazmuri, Bruce Johnson, and Anthony D'Alessio

Hypercarbia reduces myocardial resuscitability in pigs.

■ SPECIAL ARTICLE

- 353 Pain, Euthanasia, and Anesthesiologists**

Robert D. Truog and Charles B. Berde

Euthanasia may be legalized in many states in the near future, and, because of their experience with barbiturates and muscle relaxants, anesthesiologists may be responsible for giving advice on and administration of the lethal agents.

■ CASE REPORTS

- 361 Dorsal Scapular Nerve Block: Description of Technique and Report of a Case**

Kevin Haim and Bruno J. Urban

- 363 False Desaturation Due to Intradermal Patent Blue Dye**

Robert C. Morell, Theodore Heyneker, Hillel I. Kashtan, and Charlie Ruppe

- 365 Ipsilateral Shoulder Pain Following Thoracic Surgery**

Frederick W. Burgess, D. Michael Anderson, David Colonna, Michael J. Sborov, and Daniel G. Cavanaugh

- 368 High-titer Protamine-specific IgG Antibody Associated with Anaphylaxis: Report of a Case and Quantitative Analysis of Antibody in Vasectomized Men**

Ursula Adourian, Eric Lon Champaine, Carol A. Hirshman, Eugene Fuchs, and N. Franklin Adkinson, Jr.

- 372 Acute Right Ventricular Failure after Pulmonary Hypertensive Responses to Airway Instrumentation: Effect of Fentanyl Dose**

Paul R. Hickey and Susan M. Retzack

GUIDE FOR AUTHORS

The Guide for Authors is published in the January and July issues. Please refer to the Guide for the preparation of any material for submission to ANESTHESIOLOGY.

ANESAV is a code word ("coden") used by the Chemical Abstract Service to identify the journal.
